

Laminate Substrates

Bonding and Strengthening Composite Materials

Today, manufacturers require innovative technical textiles to help solve various production and performance challenges.

With over 225 years of textile manufacturing experience, our wide range of specialised, plain and lenoweave products have been designed to offer excellent strength and stability for a variety of applications.

Our laminate substrate fabrics can be specifically tailored to meet your exact specifications as our flexibility to offer a selection of colours, fabric weights, fabric widths, and strengths allows us to produce bespoke material solutions – ensuring that customer specific application requirements are met.

Developed and manufactured in the UK, our versatile, cost effective, and recyclable laminate substrates provide a strong base for various applications and can be incorporated into a variety of membranes to improve the bond between other materials.

As one of the few remaining European manufacturers of laminate substrates, we work closely with our customers to develop products for use within the industrial market.

Laminate Substrates

Don & Low
MEMBER OF THRACE GROUP

Markets where our products are traditionally found include packaging, underlays and furnishings. More recently, we have worked closely with our customers to develop products for use in construction, liners for environmental projects and reinforcement fabrics for composite hoses.

Lobrene® lenoweaves are a selection of lightweight, high strength fabrics which can easily be incorporated into a variety of membranes and create a good bond between other materials.

Our Lobrene® plain weave fabric is lightweight and printable, making it ideal for advertising purposes, or improving the aesthetics of packaging. All our plain weave fabrics can be sewn, glued, coated or heat sealed depending on customer requirements.

Lobrene® Application	Typical End use
Reinforcement	Used in a wide range of multi-layer coated roofing membranes, Lobrene® laminate substrates give a strong core to all laminated products.
GCL - Composite Liner	With high tensile strength, stability and excellent puncture resistance, our products offer many benefits in landfill applications.
Composite Hoses	We provide a strong, stable fabric with full coverage as a key element in the lining of industrial hoses. The construction of our fabric is critical to the burst resistance of the final hose product.
Packaging	Plain weave fabrics are used as a key substrate in steel and timber wrap products. Other applications include mail bags, recycling collection bags and specialist packaging. All fabrics are 100% polypropylene and completely recyclable.
Flooring	Lobrene® lenoweaves are available as reinforcement for needlepunched carpeting and plain weave fabrics can be supplied for both underlay and flooring protection.
