

Erosion Control

Technical Datasheet

Lotrak® geosynthetics can help to control erosion by creating a barrier between the water, the soil and rock particles. Separating the coast or river bank from the corrosive effects of the water, Lotrak® prevents soil and rock particles being dislodged and transported back into the sea or down river.

Rain can also cause surface or hill slope erosion; however, Lotrak® geotextiles can control the flow of water into the soil, helping to avoid landslips. Lotrak® erosion control geotextiles are also used as temporary covers while hillside vegetation is established.

Product Features

- ▶ Lotrak® erosion control geotextiles help to control erosion by creating a high performance barrier
- ▶ The high strength and with low elongation of Lotrak® provides effective ground reinforcement
- ▶ The high tensile strength and CBR properties are particularly suited as reinforcement for very soft ground

Benefits

- ▶ Excellent lightweight reinforcement
- ▶ High tensile strength
- ▶ Effective separation
- ▶ Superior reinforcement
