Don & Low

MEMBER OF THRACE GROUP

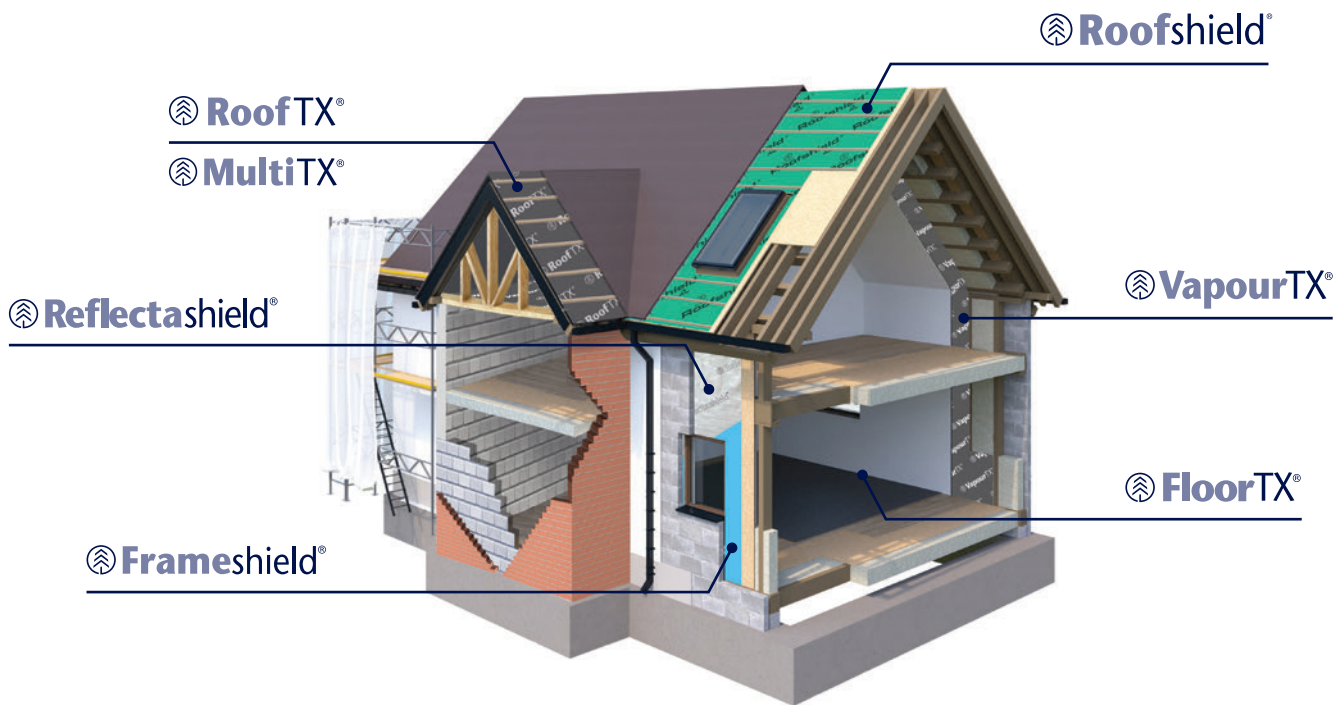

The Creators & Manufacturers of Roofshield®

⌘ Roofshield® ⌘ RoofTX® ⌘ Frameshield® ⌘ Reflectashield® ⌘ MultiTX® ⌘ VapourTX® ⌘ FloorTX®

Enter Don & Low's Complete Building Envelope Solution

Don & Low's extensive construction membrane range demonstrates the company's unwavering commitment to providing a complete building envelope solution that caters to the unique and constantly evolving demands of architects, house builders, and merchants. When it comes to high-performance roofing, walling, flooring, and site protection membranes, we've got you covered.

Moves the Construction Industry Forward

- ⌘ Legacy of over two centuries in the field of technical textiles.
- ⌘ Over 35 years of expertise in nonwovens production.
- ⌘ All construction membranes are manufactured in the UK.
- ⌘ Don & Low is UK's only vertically integrated manufacturer.
- ⌘ Membranes are recyclable and made with recycled materials.
- ⌘ Don & Low offers unrivalled print and colour customisation.
- ⌘ Stock availability ensures quick delivery times.
- ⌘ Access to product, application, and installation technical support.

Don & Low is The Premier Source for All Construction Membrane Needs

Roofshield®

Renowned Performance, Tried & Trusted by the Industry

Roofshield® is the industry's leading air and vapour permeable roofing underlay, earning over 25 years of trust through continuous use and rigorous testing. This innovative three-layer membrane allows the passage of moisture to significantly reduce the incidence of interstitial condensation in pitched roofs. When installed in cold-pitched roofs, Roofshield® eliminates the need for roof space ventilation, since moisture diffuses through the underlay. As a testament to its performance and reliability, Roofshield® is certified by the BBA in the UK for use in unventilated cold and warm pitched roofs, in both fully supported or unsupported roofing applications.

Innovation Made in the UK

Roofshield® is created and manufactured in the UK by Don & Low.

Remarkably Cost-Effective

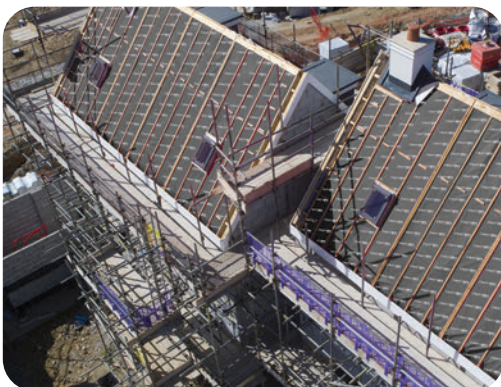

Since it eradicates the need for roof space ventilation, the use of Roofshield® vapour and air-permeable membrane yields substantial savings in both labour and material costs.

New Distribution Strategy

In response to the demand for a leaner supply chain, Don & Low will commence direct distribution of Roofshield to the UK and Ireland markets as of November 16th, 2023.

RoofTX®

Breather Roofing Underlay

RoofTX® is a range of low resistance vapour permeable air barrier underlays and breather membranes, specifically engineered to enable the passage of moisture while effectively resisting air penetration. RoofTX® is well-suited for various roofing applications, including fully supported or unsupported cold and warm systems. Offering a lightweight alternative to traditional bituminous felts with excellent flexibility, even at low temperatures, the range is certified by the BBA for the UK and by the IAB for the Irish market.

Reflectashield®

Reflective Breather Walling Membrane

Reflectashield® is a high-performance reflective breather membrane, specifically designed to enhance the thermal performance of timber and steel frame structures. Reflectashield® reduces the thermal transmittance of walls by introducing a reflective surface in the cavity between the frame and outer cladding or brickwork, inhibiting radiant heat transfer across the cavity. As the breathability of the membrane is not comprised by its thermal properties, Reflectashield® helps to assist the diffusion of moisture from the building and reduce the condensation risk.

Frameshield®

Breather Walling Membrane

Frameshield® is a spunbond polypropylene fabric, to be used as a vapour permeable breather membrane for use in timber and steel frame constructions. Once installed, the permeability of Frameshield® allows the controlled escape of vapour from within the timber or steel frame reducing the risk of interstitial condensation. Extensively used in timber frame construction for over 20 years, Frameshield® provides effective protection during construction, against wind driven rain, moisture, snow, and dust.

VapourTX®

Vapour Control Layer

VapourTX® is a range of high-resistance vapour and air barriers for internal walls, ceilings, and floors, which control condensation and air movement within the building. It is made up of 116gsm VCL116 and the heavier duty 146gsm VCL146, together with VapourTX® Thermo, which with the addition of a highly reflective foil, enhances the overall thermal performance of the wall when placed on the warm side of the insulation.
