

Vapour permeable Breather Membrane and Housewrap

- Excellent breathability minimises condensation risk
- Stabilised against UV degradation
- Allows protection of timber and light gauge steel frames, SIPS and CLT Panels from wind driven rain, snow and dust during construction, together with the controlled release of vapour from the structure
- Fabric Weight 100g/m²

Installation

Frameshield should be fixed to frames using Austentic stainless steel nails or staples at centres not exceeding 500mm. Where the material is to be lapped, these should be as below:

- Vertical Laps – not less than 150mm
- Horizontal Laps – not less than 100mm

Ensure integrity of Frameshield by overlapping upper layers over lower layers and staggering vertical joints. Overlap wall / sole plate with membrane and mark stud positions for wall fixings.
