

Protection Delivered.

With a complete building envelope **engineered to perform and made to last**, Don & Low consistently delivers success in the construction industry.

Made in the UK and **certified** by renowned third-party organisations while meeting the evolving demands of diverse structures and projects across the nation, Don & Low's construction membranes **set the benchmark**.

From Forfar, with love.

The Don & Low
Complete Building Envelope

Roofshield® MultiTX® RoofTX® VapourTX® Reflectashield® FrameTX® FloorTX® Proshield®

The Don & Low Building Envelope

Roofshield®

Roofshield® was the first air- and vapour-permeable roofing underlay to hit the market and has earned almost 30 years of trust through continuous use and rigorous testing. Roofshield® provides a superior secondary barrier for roofs, protecting against the ingress of rain, wind and snow. In practice, this innovative and versatile membrane allows moisture to pass through, significantly reducing the incidence of interstitial condensation in pitched roofs. Eliminating the need for roof space ventilation in cold- and warm-pitched roofs, Roofshield® offers consistent performance and reliability, as certified by the BBA and NSAI.

RoofTX®

The RoofTX® range of vapour-permeable air barrier roofing membranes is engineered to allow moisture vapour to pass while resisting air penetration. Competitively priced without compromising performance, the range includes seven products of varying weights and designs to suit a wide range of UK roofing applications, including fully supported and unsupported cold and warm roof systems. Lightweight and highly flexible even at low temperatures, RoofTX® is certified by the BBA in the UK and NSAI in Ireland.

MultiTX®

MultiTX® is a high-vapour-resistance, air- and liquid-barrier roofing underlay range, offering a lightweight, cost-effective modern alternative to traditional bituminous felts. Suitable for ventilated pitched cold and warm roofs, it provides excellent temporary weather protection across a range of wind zones. The BBA-certified range includes MultiTX® Plus (116g), MultiTX® Pro (145g), MultiTX® Maxi (190g), and MultiTX® Solar, which completes the family for integrated solar roof applications.

Reflectashield® & VapourTX® Thermo

For timber frame, steel frame, and modular build-ups, reflective membranes offer a convenient and effective way to enhance thermal performance. Don & Low delivers this through Reflectashield® and VapourTX® Thermo.

Reflectashield® is a vapour-permeable membrane for the cold side of insulation, featuring a highly reflective aluminium foil lamination. Its low emissivity makes it ideal for unventilated airspaces and provides temporary weather protection before façade installation. With low vapour resistance, it complies with BS5250, helping reduce the risk of harmful condensation within the frame, whilst having W2* class water holdout.

VapourTX® Thermo is a high-performance vapour control layer (VCL) for floors, walls, and ceilings. Installed on the warm side of the insulation, its reflective aluminium foil creates a low emissivity environment in unventilated airspaces, acting as an airtight barrier that improves thermal efficiency, controls condensation, and meets BS5250 requirements.

FrameTX®

An air-tight, vapour-permeable walling membrane for use as temporary protection for timber and steel frames against the elements. FrameTX® offers W1* class water holdout and is available in a variety of colours with bespoke print.

Frameshield®

Frameshield® is a high-performance air and vapour-permeable breather membrane for timber and steel frame constructions. Age tested against UV degradation and providing effective protection during the building process against wind-driven rain, moisture, snow and dust, with W2* class water holdout.

FloorTX® FCM

FloorTX® FCM creates an air- and water-tight envelope around the external face of floor cassettes, providing temporary protection from wind-driven rain and snow. Vapour permeable by design, it helps minimise condensation at floor cassette edges and wall junctions, while sealing to the wall's air and vapour barrier ensures airtight continuity at the floor-to-wall interface.

FloorTX® FR provides temporary, easy-to-remove floor protection, helping prevent damage and maintain a clean surface before the final floor finish. Fire-retardant, it inhibits flame spread and complies with relevant British standards.

Proshield® is a fully self-adhesive, vapour-permeable and airtight membrane designed to simplify airtightness in modular and high-rise construction, whilst offering Class B-s1, d0 fire resistance (when fitted to a suitable substrate). It bonds directly to fibre cement, calcium silicate, OSB, timber, concrete and steel, making it ideal for mixed-material wall and floor panels without primers or mechanical fixings. **KIWA** certified, Proshield® is proven to perform not just on flat surfaces, but across real-world details such as edges, junctions and opening reveals — giving confidence where it matters most. Fast to install and highly reliable, it supports energy performance targets while delivering robust, consistent airtightness and W1* class water holdout.

* STA Advice Note 18 advises the use of a W1 walling membrane in coastal and exposed areas, however there is no British Standard requirement. Hence, Don & Low offers customers the flexibility to choose between W1 and W2 options.

All products are manufactured under BS EN ISO 9001.
