## Eaves Protector Underlay Support Tray

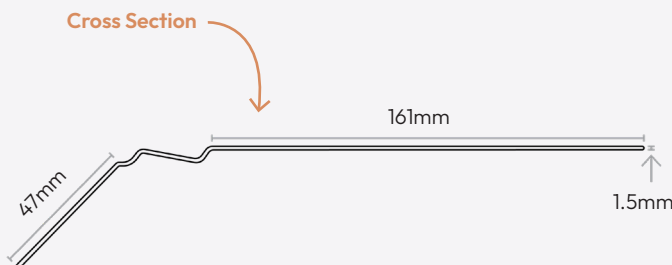

### Datasheet

The Underlay Support Tray is a UV stable application to prevent the exposure of the roofing underlay at the eaves. As most underlays are not UV stable, long term exposure can cause degradation and increase the risk of water ingress into the roof structure. Underlay Support Trays prevent the underlay from sagging behind the fascia board and also the accumulation of ponding water, eliminating the need to install traditional timber tilting fillets.

#### Guidelines

To be fitted while laying the roofing underlay and associated eaves products. Used in conjunction with soffit / fascia vents, rafters trays and bird comb. Place the flat profiled front edge over the fascia, fixing the support tray in place into the rafter at the top of the underlay support tray. Finish by laying underlay over the support tray.

Specifications	
Product Code	DLTUST
Product	Underlay Support Tray 1.5m
Weight	855g
Pcs / Carton	20
Cartons / Pallet	50
Material	Recycled PVC
Manufacturing Process	Extrusion
Colour	Black

\*all dimensions are + or - 1mm
